

ABSTRACT OF THE DISCLOSURE

To provide the micromixing method for liquefied matter containing plural types of substance which can be also applicable to promote chemical reaction among the plural types of substance with the micromixing when the plural types of substance are reactive each other.

Liquefied matter containing plural types of substance is promoted to mix in the molecule level by permeating through the numerous cylindrical micro- holes in the diameter from 0.03 to 100 micron meters formed in the phase separation porous body.
